Bio Clean's Signature Product Receives Honored Verification

Corporation for Advanced Technology Verifies Suntree Nutrient Separating Baffle Boxes

Bio Clean Environmental Services, Inc., a full service stormwater filtration company, announced that their signature product, the Suntree Nutrient Separating Baffle Box, has received the honorable verification from the New Jersey Corporation for Advanced Technology (NJCAT).

NJCAT has verified the stormwater treatment performance capabilities of the Suntree Nutrient Separating Baffle Box. Specifically the Suntree Nutrient Separating Baffle Box, Model NSBB-3-6-72, at a treatment flow rate of 1.0 cfs (448 gpm; 24.9 gpm/ft²), has been shown to have a 67.3% suspended solids concentration (SSC) removal efficiency (as per the NJDEP methodology for calculation of treatment efficiency) using NJDEP specified material with an average d50 particle size of 63 microns, influent concentrations of 100-330 mg/L and 50% initial sediment loading in laboratory studies using simulated stormwater.

NJCAT, a public-private partnership, oversees the rigorous verification programs required to provide guidance on the use of newly available stormwater manufactured treatment devices. Government and private groups in throughout the country consider NJCAT's verification a significant credential when determining which equipment to select for stormwater management projects. The result of successfully completing this program is documentation of independent third party confirmation of claims that provides valuable information to business and governmental decision-makers.

The Suntree Nutrient Separating Baffle Box removes pollutants from stormwater. "As our most requested product, Suntree Baffle Boxes have become standard in our service area," said Greg Kent, President of Bio Clean Environmental Services, Inc. "They are dependable, effective and efficient. They have earned the honored verification from NJ CAT and will continue to perform up to those high standards."

About Bio Clean/Modular Wetlands

Bio Clean Environmental, Inc. has been a leader in the stormwater filtration industry since 1998, providing highly efficient pollutant-reducing systems to the western region including California and Hawaii. Based out of Oceanside, CA, the company leads the industry in system quality, design, and dependability. Bio Clean meets and exceeds the strict and ever changing water quality regulations to keep our environment safe and our water clean. For more information on Bio Clean, visit www.biocleanenvironmental.net. Responsible for reducing the pollution of oceans and bays, the Modular Wetlands product utilizes nature and technology to create an innovative hybrid stormwater treatment system - the first of its kind. For more information on Modular Wetlands, visit www.modularwetlands.com.
